Score for this quiz: **9** out of 10

Submitted Sep 9 at 5:03pm

This attempt took 45 minutes.

Question 1

3 / 3 pts

Please write one CSS selector that targets the div with the text "Target Me" and another that targets the div with the text "Me too!"

```
<div>
  <div class="header">
    <div>Target Me</div>
  </div>
  <div id="content">Me too!</div>
</div>
```

You can also get 1 extra point if you can give 2 additional selectors that only target the "Target Me" div and do not use class, tag name or id as part of the selector.

Your Answer:

Target Me

```
div div div { }
```

Me Too!

```
#content { }
```

That'll work. Interesting first answer.

Question 2

1.5 / 2 pts

Your boss tells you that it is their team's policy to not use CSS for styles but to always use inline styles instead. They say that using inline styles makes it easier to tell which elements are getting which styles and therefore are easier to maintain. What would you say to your boss to change their mind?

Your Answer:

In-line styles are hard to maintain, compose, and read. Code can be very repetitive with in-line style. Also, there are security issues using them.

There should not be any more security issues with inline styles than CSS

Question 3

4.5 / 5 pts

Please write CSS that, when combined with the following HTML, renders to look like the image below. Please pay attention to the borders, colors, spacing, location, and font size.

Hint 1: Try looking at <https://rk0.xyz/courses/cis-1052/lessons/css-and-html/examples/4> [\(https://rk0.xyz/courses/cis-1052/lessons/css-and-html/examples/4\)](https://rk0.xyz/courses/cis-1052/lessons/css-and-html/examples/4) to figure out the last section.

Hint 2: Feel free to try your answer out in Visual Studio code to make sure your answer looks right

```
<section class="box-a">

  I have bold text and take up a
  lot of room! Notice the space
  between my text and border?
  Pretty cool huh?

</section>

<section class="box-b">

  I am shy and blue

</section>

<section>

  I'm a bit more sneaky

</section>
```

Your Answer:

```
.box-a {  
  border:5px purple;  
  border-style:solid;  
  margin:10px;  
  padding:10px;  
  font-weight:bold;  
}
```

```
.box-b{  
  color: blue;  
  border-color:blue;  
  border-width:5px;  
  border-style: dotted;  
  margin-top: 10px;  
}
```

```
section{  
  position: fixed; bottom 10px right 10px;  
  border-color:gray;  
  border-width:5px;  
  border-style: solid;
```

```
}
```

Looks good overall. The last selector is not quite perfect. It would select all `<section>` elements

Quiz Score: **9** out of 10
