Question 1	3 / 3 pts

I have a friend named Patrick Smith. He is 26 years old, and has a mom named Alice and a dad named Bob. He speaks English and Finnish. Please describe Patrick in XML. Don't worry. There is not one right answer. Maybe use <Person>...</Person> as a template

Your Answer:

<person>

    <name>Patrick Smith</name>

    <mom name>Alice</mom name>

    <dad name>Bob</dad name>

    <age>26</age>

    <can speak>

        <language>English</language>

```
      <language>Finnish</language>

    </can speak>

</person>
```

> Nitpick: XML tags are supposed to be one word. Most developers would write it as "MomName". But we didn't cover that in class.

Question 2   5 / 5 pts

Please write up the HTML for the following sample web page. Remember to include the standard "skeleton" HTML tags that every document should have.

RyanCorp Products

RyanCorp manufactures a large selection of useful things including:

- Widgets
- Buttons
- Flowchart Printers

Look below for our **low low** prices

Name	Price
1 Widget	$10.00
100 Buttons	$12.00

Your Answer:

```
<html>

    <head></head>
```

```
    <body>

        <h1>RyanCorp Products</h1>

        <p>RyanCorp manufactures a large selection of useful things
including:</p>

        <ul>

            <li>Widgets</li>

            <li>Buttons</li>

            <li>Flowchart Printers</li>

        </ul>

        <p>Look below for our <strong>low low</strong> prices</p>

        <table border="1px">

            <thead>

                <tr>

                    <th>Name</th><th>Price</th>

                <tr>

            </thead>

            <tbody>

                <tr>

                    <td>1 Widget</td><td>$10.00</td>

                <tr>

                <tr>

                    <td>100 Buttons</td><td>$12.00</td>

                <tr>

            </tbody>

        </table>

    </body>

</html>
```

Question 3　　　　　　　　　　　　　　　　　　　　　**2 / 2 pts**

Suppose you are making a news web page for senior citizens. In order to accommodate potentially poor eyesight among some of your readership, the text of the article should be large so it is easy to read. An <h2> tag already has the right font size for your content. Is it appropriate to use it for the body of your articles? Explain.

Your Answer:

No, it is not appropriate to use for the body of the article because <h2> tag means a specified level of organization head., not a specific text size. To change the text size of the body of the article, we can use CSS to make the font larger.

Exactly
